Objective

To pursue a role in data engineering and software that will complement my experience and background, as well as challenge and develop my professional skills.

Abstract

Over 15 years of experience working in a variety of data engineering, data migration, enterprise architecture, and customer facing engineering roles. Advanced proficiency of software development in Python, DevOps (Git, CI/CD, test automation), open source contributions. Extensive experience consulting with and implementing solutions for GCP's largest and most critical customers.

Work Experience

Google, Sunnyvale, CA

Alooma was acquired by Google in early 2019. As part of the acquisition my role was absorbed into Google's Professional Services Organization (PSO)

2019-Present

- Architected and delivered end-to-end cloud infrastructure, migration strategies, and data pipelines for Fortune 500 enterprise customers, ensuring high availability and scalability.
- Led complex cloud migrations and modernization initiatives, reducing infrastructure costs by [X]% and improving system performance by [X]% using Google Cloud Platform (GCP) services.
- Partnered closely with customer stakeholders and executive leadership to align technical architectures with strategic business objectives, accelerating time-to-market for critical applications.
- Collaborated with internal Google Product and Engineering teams to provide customer feedback, driving product improvements and influencing the roadmap for core GCP services.
- Mentored and upskilled customer engineering teams on cloud best practices, DevOps methodologies, and site reliability engineering (SRE) principles.

Alooma, Redwood City, CA

Alooma was a streaming ETL solution focused on moving realtime transactional data into cloud analytics platforms such as Redshift, Snowflake, and BigQuery

2016-2019

- Designed and implemented scalable real-time data integration pipelines, enabling enterprise clients to seamlessly ingest, transform, and move massive datasets into modern data warehouses.
- Served as a technical subject matter expert during the onboarding and implementation phases, troubleshooting complex data infrastructure issues and optimizing query performance.
- Developed custom integrations and plugins (using Python, Java, etc.) to expand platform capabilities and support diverse customer data sources and destinations.
- Partnered with Sales and Product teams to deliver technical demonstrations, scope engineering requirements, and translate customer pain points into actionable product features.

Schoolzilla, Oakland, CA

Schoolzilla was an enterprise data warehouse platform that provided insights and data visualization solutions to K-12 Education

2013-2016

- Developed audit strategies to ensure data quality
- Provided guidance on data storage solutions
- Develop software solutions in R, SQL, and Excel to process, clean, and visualize incoming data.
- Manage working relationships with in-house developers and external vendors

KIPP Foundation, *San Francisco, CA*

KIPP is a national network of charter schools that provides college preparatory education to underserved communities *Data Systems Analyst*

2013-2016

- Develop audit strategies to ensure data quality
- Provide guidance on data storage solutions
- Develop software solutions in R, SQL, and Excel to process, clean, and visualize incoming data.
- Manage working relationships with in-house developers and external vendors

Data Collection Specialist

2011-2013

- Collected, QA'd, and loaded data from a wide variety of public and private sources
- Ensured the accuracy and validity of data as it was loaded into our storage and reporting systems
- Wrote complex SQL queries and ETL processes for analysis purposes
- Managed and improve upon existing web-input systems to maximize ease and accuracy of collection
- Maintained professional relationships with a diverse and distributed network of data contacts
- Contributed to the construction of data exhibits for multi-million dollar grant applications

Net Impact, *San Francisco, CA*

Net Impact is a global membership network of MBAs and professionals focused on Corporate Social Responsibility

Program Intern

2010-2011

- Manipulated and cross-referenced large amounts of data across several database platforms
- Calculated payout percentages for over 70 chapters in Excel using pivot tables and advanced formulas
- Contributed to the analysis, design, and implementation of an annual survey to improve chapter support
- Managed and compiled regular HTML newsletters that reach an audience of 3,000+ subscribers
- Provide immediate technical support and prioritize tasks accordingly

Educational Background

University of Michigan, *Ann Arbor, MI*

Major: Political Science and History (BA)

Graduated April 2010

Relevant Coursework: Statistics, Economics, Political Modeling (Complex Systems), Game Theory

Miscellaneous Skills

Language: Conversational in Japanese and French

Hobbies: My dog, 3d printing, crafting, video games
